

Schedule24 Resource Manager

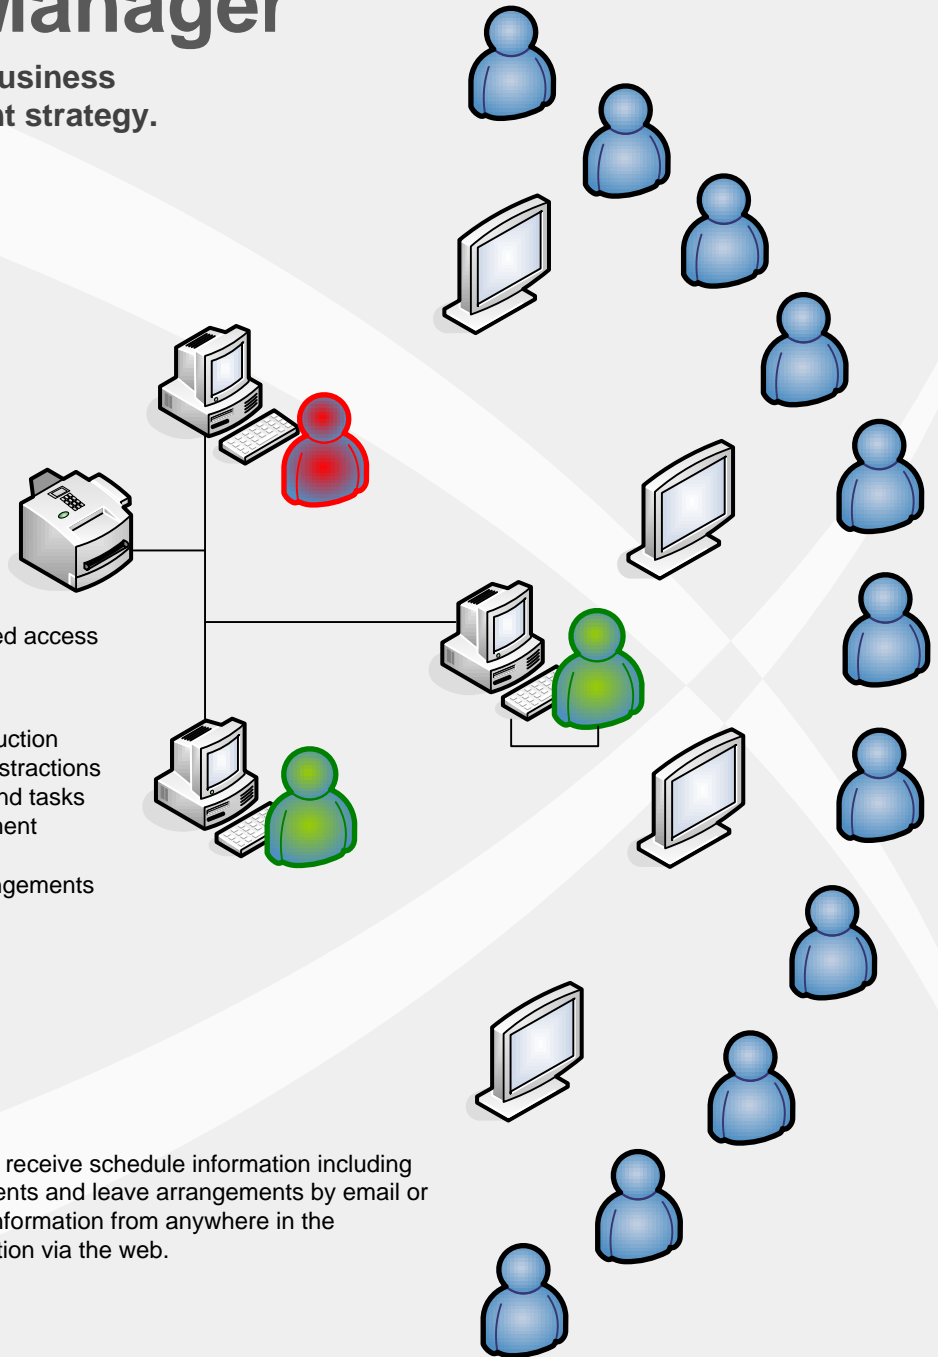

Deploy over standard Windows® networks so a range of business operations can benefit from a coordinated staff deployment strategy.

A standalone solution enables even the smallest operation to benefit from powerful enterprise class features to manage limited resources. Schedules can be managed locally and published globally via the web.

Resource Managers have shared access including:

- Shift Patterns
- Automating schedule production
- Monitoring and tracking abstractions
- Scheduling assignments and tasks
- Operational cost management
- Working hours compliance
- Flexible staff working arrangements
- Business Reports

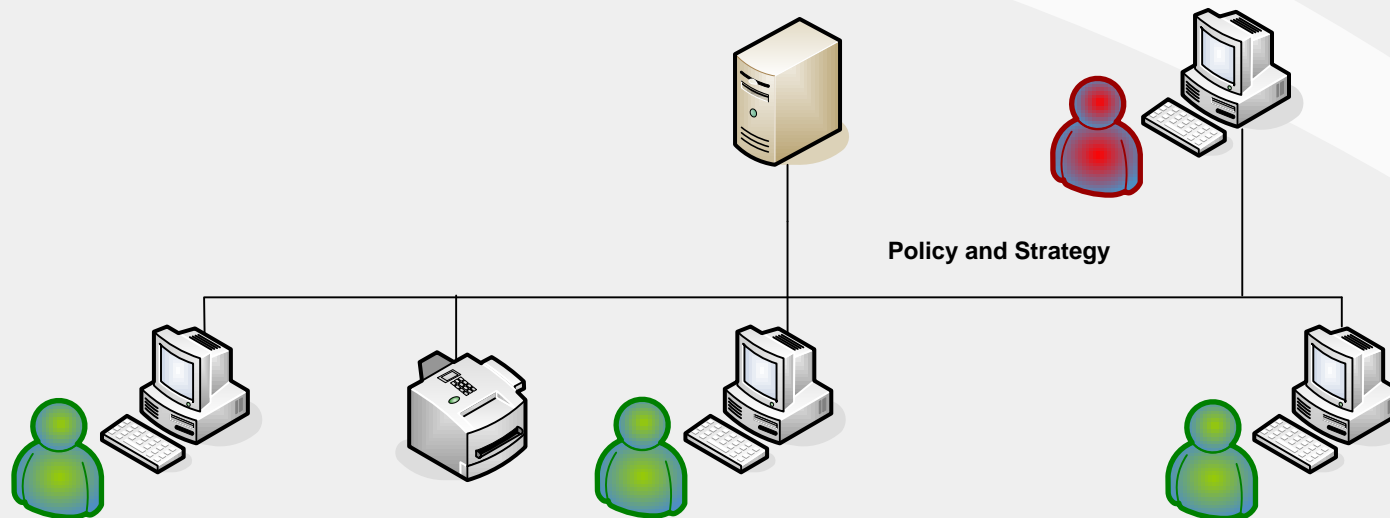

Staff can receive schedule information including assignments and leave arrangements by email or access information from anywhere in the organisation via the web.

Schedule24 Resource Manager

Organizations can deploy Schedule24 Resource Manager over a wide area network using Citrix® or Terminal Server®.

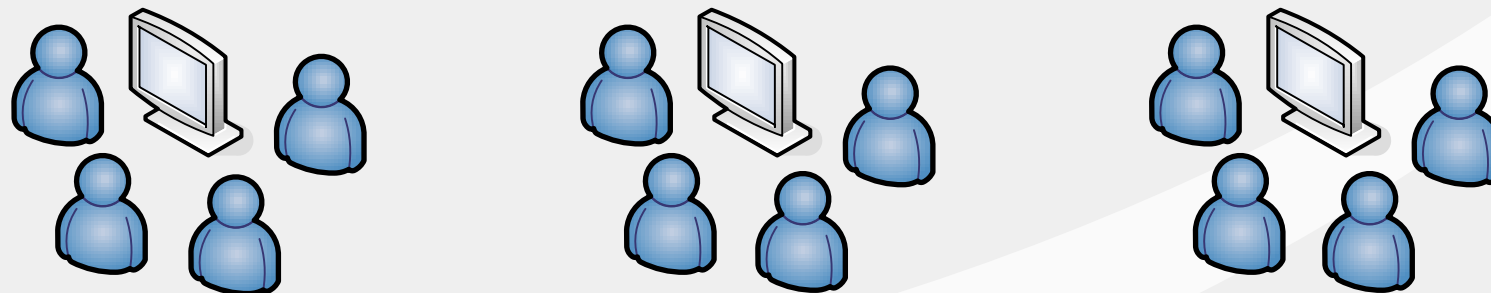

Policy and Strategy

Forward Planning and Coordinating Resources

Managers can design Shift Patterns and Schedule Templates to standardise a range of staff deployment strategies.

Resource Managers have shared access including:

- Shift Patterns
- Schedule Templates
- Automating schedule production
- Monitoring and tracking abstractions
- Scheduling assignments and tasks
- Operational budget management
- Working hours compliance
- Flexible staff working arrangements
- Business Reporting

Communication and Action

Operations Staff can see their schedules anywhere in the organisation via email or web browser.
